# About Spreaker

Launched in January 2010 by CEO Francesco Baschieri and CTO Marco Pracucci, Spreaker is a podcast creation, hosting, distribution, and measuring platform.

Desktop and mobile apps for [iOS](#), [Android](#), and [Windows](#) offer a complete console where users can create audio on the go, mixing voice with music, tracks, and effects. Live chatting allows podcasters to interact with fans in real time, and connecting with social networks helps extend their reach to new listeners. Detailed analytics are also accessible to help users track their progress and understand their audience.

In addition, listeners can use the web and specially made apps to search and discover original podcasts and shows, get closer to hosts through live chats, like and follow, and share their findings with friends.

Spreaker is currently working with [iHeartRadio](#), a media network part of [iHeartMedia](#).
